

## Attachment A

### Clarification of Purchaser and City Responsibility:

The Purchaser is responsible for the complete disassembly and transportation of substation transformer (TR8). The City will provide crane and one man to operate it for the disassembly of TR8. City will provide crane to load TR8, bushings, fins, etc. onto semi. Transformer TR8 is in a double bay substation. One bay will still be energized but will be sectioned off with orange fencing. Arc rated clothing must be worn in the substation with a minimum of 8 cal rating as well as hard hat, safety glasses, steel toe boots as well as any other PPE identified prior to entry.

[illegible]

Gillette WY 82716

We would offer you \$20,000.00 for your surplus McGraw Edison 9 MVA with S/N C-46102-1-1. We will need to remove the primary bushings and arrestors from the top of the transformer and will need your crane or digger truck and operator to lift those off the top of the transformer for us. Once the bushings and arrestors have been removed and the bushing holes capped you will have to load the transformer onto our truck.

Any questions just let me know.

Thanks,
