Re: Gillette Madison Pipeline Project, Contract #2B
Morrison Maierle Project Number 4776.002

Mr. Jensen:

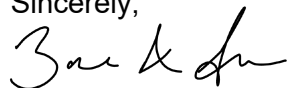

Hot Iron, Inc. has completed all tasks associated with the Gillette Madison Pipeline Project, Contract #2B. The wells were able to be operated by hand mode on October 1, 2019 with all piping in tested, disinfected, and line M-11 and M-12 flushed. EFI set the valves in to the two buildings thus allowing operation of the wells to the specifics of the contract.

Their punch list consisted of blading the road in several locations for site access and placing permanent decals on the on/off switches on the electrical gear. A walk-through and acceptance was done on October 21st, 2019 with Bryan Garland and Zane Green. The final item needed to be resolved was a salvage value of the phase shift transformer after it was analyzed for repair. Hot Iron, Inc. issued a check on January 2020 to the City of Gillette for the face salvage value finalizing the last change order and final payment.

Morrison Maierle recommends that the Gillette Madison Pipeline Project, Contract #2B enters Final Acceptance as of January 31, 2020.

If you have any question or need additional information, please let me know.

Sincerely,

Zane Green, P.E.
Project Engineer
